22 files touched

4 feature areas

1 bug caught while documenting

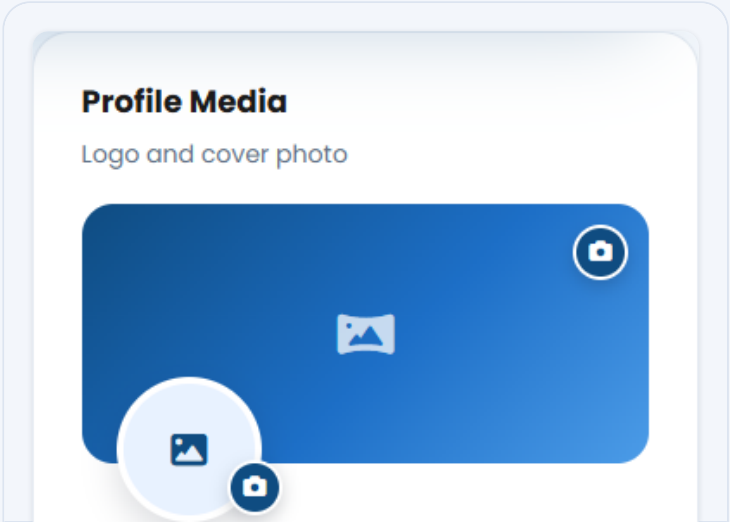

● Partner Portal Redesign

Both the admin-facing and public partner profile pages, and the dashboard's own profile editor.

Rebuilt the public partner-profile page to match the site's theme, with a working "Find Us" Google Map and social links grouped by platform instead of one raw text blob.

view-partner-profile.php

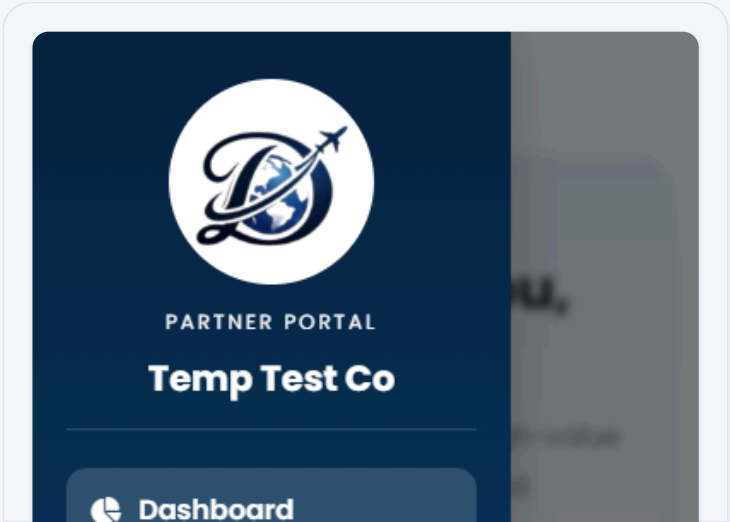

Replaced the old plain upload boxes with a proper cover-photo banner and an overlapping logo circle, each with its own camera-icon upload trigger.

partner-dashboard.php

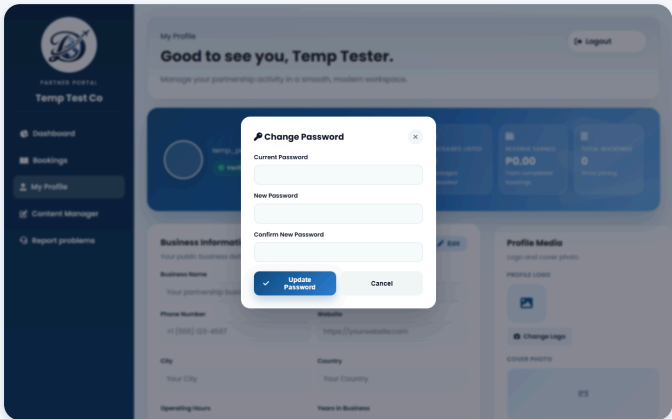

Split the single social-links textarea into branded Facebook / TikTok / X / YouTube / Instagram fields laid out in one clean row, plus an "Other Links" field that auto-detects the platform.

partner-dashboard.php

Added a proper mobile hamburger menu and slide-out sidebar to the partner dashboard, which previously had no usable mobile navigation.

partner-dashboard.php

Added a self-service "Change Password" modal to the partner dashboard, which previously had no way to update a password after registration.

partner-dashboard.php

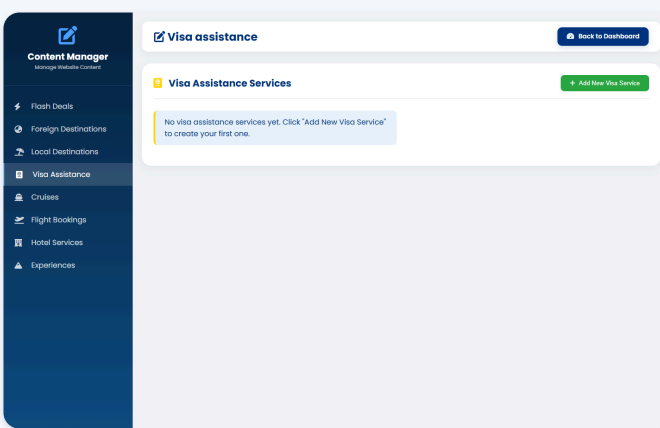

● Content Managers

Admin and partner-side package/service editors — cruises, flash deals, destinations, visas.

IMAGE	CRUISE DETAILS	SCHEDULE	PRICE	STATUS	ACTIONS
	Aegean Explorer Code: D0CSHOT	 N/A 7 Days	P 45,000.00	AVAILABLE	 
	test Code: test723	 N/A	P 999.00	AVAILABLE	 
	fdsf Code: sdfsd	 N/A	P 88.00	AVAILABLE	 

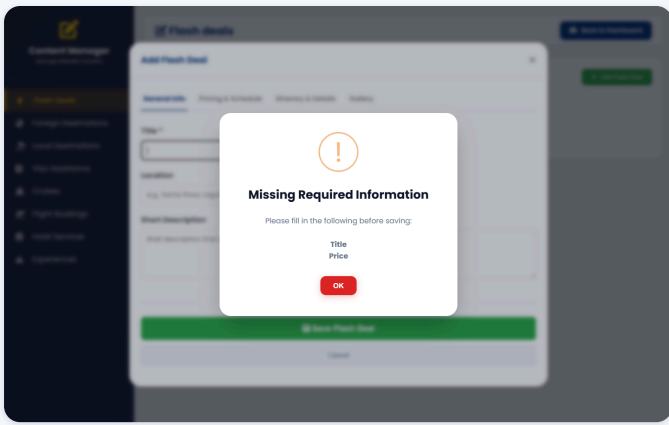

Cruises without a photo now show a ship icon placeholder instead of a broken-image icon, matching how Flight Bookings already handled it.

content-manager.php · partner-content-manager.php

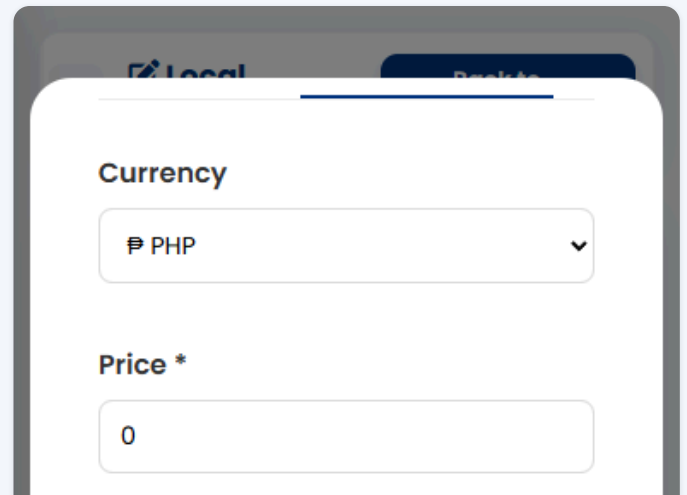

Recolored both content managers' sidebars to match their respective dashboards' navy palette instead of a mismatched dark-purple/amber theme.

content-manager.php · partner-content-manager.php

Forms now clearly list every missing required field before saving, instead of silently failing when a required field is hidden inside an inactive tab.

`content-manager.php` · `partner-content-`

Removed a sticky modal header that was clipping form fields under itself when scrolling on mobile.

`content-manager.php` · `partner-content-`

● Account Verification

New requirement that users verify their email before signing in, built to be safe for accounts that already existed.

Login now blocks unverified accounts and offers a one-click "Resend Verification Email" — the resend button was invisible until a site-wide CSS rule hiding it was found and fixed while building this document.

`login.php` · `database.php`

+ A one-time, self-running migration grandfathered in anyone who already had a real login session before this requirement existed, so no existing user gets locked out — new signups still must verify.

`database.php`

● Behind-the-Scenes Fixes

Bugs and reliability issues with no single screenshot, but real impact.

- ✓ Fixed a critical cruise-saving bug where partner ID fields were bound to the SQL query after the query was already built, causing every cruise save to fail with a database error. `partner-content-manager.php`
- + Cruise saves now automatically add any database column the code needs but the table is missing, and return a real error message instead of a blank screen if something still goes wrong — this exact scenario was reproduced and confirmed fixed. `content-manager.php` · `partner-content-manager.php`
- ✓ Fixed the site's clock silently using the server's default timezone instead of Philippine time for bookings and vouchers. `database.php`
- ✓ Created the partner logout page, which didn't exist at all — every "Logout" link in the partner portal was a dead link. `partner-logout.php` (new)
- ✓ Fixed broken profile image paths and a broken "Back to Dashboard" link on the admin-viewed partner profile. `partner-profile.php`
- + Added live typing indicators to the AI Live Chat, visible to both the admin and the customer while the other side is typing. `marketing.js` · `ai_chat_admin.php` · `floating_chatbot.js` · `inquire.php`
- ✓ Removed duplicate "Back" buttons that appeared twice on both partner profile pages. `partner-profile.php` · `view-partner-profile.php`

Also investigated, not shipped

Built a same-page email-existence checker (domain + provider-format + live SMTP mailbox probe) for registration, then fully reverted it back to the original at your request — it's documented in conversation but not part of the current code.
